

## Web Applications

### Decision Support Systems

Cogent Security Solutions provides tools that enable in-the-field users to focus on their business, while providing a mechanism for enterprise managers to oversee operations. The solutions provide:

- End-user hierarchy and e-authentication for user management, information access, and auditing
- Executive-level user types for enterprise-wide, ad-hoc reporting
- Intuitive user interfaces
- Alerts, reminders, and reports tailored to user types
- Data validation to ensure compliance with documented business processes
- CAC, PIV, and TWIC integration

### Web Content Management

Cogent Security Solutions improves the stakeholder experience by implementing commercial-off-the-shelf (COTS) Content Management Solutions that fit your business needs. These solutions:

- Automate and streamline website management
- Enable the dissemination of relevant, up-to-date, and approved content across the enterprise
- Provide personalized content to users
- Manage and disseminate information to stakeholders
- Ensure the usability of citizen-facing applications

We are well-known for our high-quality, custom web applications and content management solutions. Our solutions meet security and architecture requirements for federal and state governments. This includes adherence to the governing policies for the business processes we are improving.

Our services include:

- Requirements development and analysis
- Solution design, development, testing, and implementation
- End-user training and customer service
- Marketing and outreach to current and potential stakeholders
- Content in multiple languages
